

Commissioners,

I'm expressing support for the addition of amateur spectrum at 136 KHz and 5 MHz, as well as creating a new primary allocation at 2.4 GHz. The 5 MHz band in particular will be exceptionally helpful for emergency communications into the Caribbean during hurricanes or other disasters.

Protection of existing amateur spectrum and allocation of new is of critical importance in ensuring emergency communications. Amateur radio operators prove over and over our ability to communicate under any and all conditions, and at no public expense. At this time of national need, this ability is more important than ever.

Sincerely,

James L. Anderson, KA9VHG
